Instructions

MCrafterzz edited this page on Aug 16, 2019 · 20 revisions

Getting Started:

1. Download the .unitypackage file.
2. Open it into your Unity project.
3. Setup Lightweight Render Pipeline.
4. Turn of baked global illumination if it's on.
5. Add four new layers: Ignore Mouse Ray, Road, Intersection and Prefab Line. It's super important that they have exact the same names as specified as the tool otherwise won't work at all.
6. Press "Create GameObject > 3D Object > Road System".
7. Click "Create Road" button that is displayed in the scene view (https://github.com/MCrafterzz/roadcreator/wiki/Using-the-creation-gui).
8. Place points with shift + left click.
9. Change materials, width etc for your segments. It's recommended to select all your segments so that you don't have to change the values for every segment manually.
10. Continue using the tool until you get a result that you are happy with.

Controls:

Roads

Insert segment: Left click + A

Divide road: Left click + D (Not on control points or the road's first/last point)

Roads And Prefab Lines:

Place point: Left click + shift.

Move point: Left click + mouse drag.

Move point up and down: Left click + plus key or left click + minus key.

Remove point: Right click + shift.

Copy settings: Middle click

Intersections:

Create intersection: Move two end/start points to the same position.

Connect road to intersection: Move start/end point onto intersection mesh.

Connect road to intersection while keeping previous position: Move start/end point onto intersection mesh while holding down P.

Remove intersection: Move point outside the intersection mesh.

Change connection position: Move point outside the intersection mesh while pressing S.

Change sharpness of connection curve: Click on the intersection and then on one of the green cylinders (curve points). Drag the mouse and release. The intersection will now have updated to be more curved instead of a straight line.

Reset curve point: Right click

Move connected road points: Left click + mouse drag
