Using the creation gui

When any road related object is selected this will render in the scene window. This is the only way to create roads, prefab lines and roundabouts.

The two buttons in the top row are settings. The first determines if the next created road/prefab line segment should be straight or curved. The second one enables/disables road guidelines.

The second row is to create road objects. The first creates a road, the second a roundabout, third a prefab line and the last one a traffic light.
